Reference: 5

P., Baillière, 1832; un volume in 8 relié en demi-toile verte (reliure de l'époque), 4pp., 652pp.

Comment: ---- PREMIERE EDITON FRANCAISE traduite sur la seconde édition anglaise par A.N. GENDRIN à laquelle il a "jugé nécessaire d'y joindre des notes destinées à compléter les observations de l'auteur sur des points que ses travaux cliniques lui ont mis dans le cas d'étudier plus directement". (Préface de GENDRIN)---- BON EXEMPLAIRE ---
- "FIRST TEXTBOOK OF NEUROPATHOLOGY". (GARRISON N° 2285.2 1st english ed.) ---- "A classical and a standard Work in Neurology". (MacHenry) ---- "An early study that may be considered to have originated the development of neuropathologie itself. Abercrombie's pathological studies of the brain appeared originally in articles in the Edinburg Medical and Surgical Journal. These were published as a separate monograph entitled Pathological and practical researches on diseases of the Brain ans Spinal Cord... The present work is divided into four parts consisting of clinical case histories and pathological findings along with his comments in over 150 cases representing a variety of neurological conditions. His definitive descriptions of the various diseases afflicting the brain, spinal cord, and peripheral nerves were a major contribution to neuropathology and this book stands as a milestone in the development of neuropathology". (Heirs of Hippocrates N° 1355 1st english ed. & MacHenry pp. 249/251) ----
GARRISON n° 2285.2 (1st english ed.) - MacHenry pp. 249/251 - Haymaker pp. 128 & 328 - Hunter & Macalpine pp. 801/804 -** (5.H3)
