

ALEMBERT (Jean Le Rond dit D'ALEMBERT) -- D'ALEMBERT - CONDORCET - BOSSUT (Abbé)

Nouvelles expériences sur la résistance des fluides ---- EDITION ORIGINALE

Référence : 7990

P., Jombert, 1777, un volume in 8 relié en pleine basane marbrée, dos orné de fers et caissons dorés, tranches rouges (reliure de l'époque), (coiffes émoussées, mors partiellement fendus mais solides), (2), 232pp., 5 PLANCHES DEPLIANTES

Commentaire : ---- EDITION ORIGINALE ---- "D'alembert became associate of the Academy at twenty-four, being electer to membership in 1754 and becoming permanent secratery in 1772. These towing tank experiments were preceded only by those of Benamin Franklin. In the present work, Bossut reports on the experiments on the resistance of bodies in connection with inland navigation, which were conducted in 1775 by D'ALEMBERT, CONDORCET and himself at the request of the government. Using a towing tank constructed under Bossut's supervision, it was determined that the resistance inceases as the relative area of the canal diminishes. The text describes the preparations for the experiments and supplies numerous tables of the result". (Bibliotheca mecanica p. 9) -- DSB I pp. 110/117**7990/ARM1A

Prix : **650,00 €**
